## EDUCATION

---

**Bachelor of Engineering, Software Engineering | OsloMet | Oslo | August 2022 – June 2025 | GPA: 4.6/5.0**

**Certificate of Apprenticeship, Computer Electronics | Elvebakken vgs. and Intility | Oslo | August 2009 – January 2014**

## EXPERIENCE

---

**IT Consultant (Software Development) | Decisive AS | August 2025 – Present**

- Project at NAV for automatic handling of health reimbursements related to exemption cards (frikort)
- Spring, Kotlin, Microservices, Event-driven architecture, Docker, Kubernetes

**Incident Responder | Intility | Oslo | November 2017 – July 2022**

- IT Operations, monitoring and incident management of network and server infrastructure and a wide range of business applications and services
- Handle operational incidents and alerts in the monitoring system, troubleshooting, fixing or escalating complex and critical errors. E.g. downtime, resource usage or other issues with networks, servers and various applications and services. Other tasks included deleting servers, changing server resources, restoring servers or files from backup. Worked with technologies such as Windows Server, Linux, Cisco, VMware and Azure.
- Training of support technicians in monitoring and incident management.

**Senior Technician | Intility | Oslo, Singapore, Auckland | October 2015 – October 2017**

- Distribute tickets to and assist support-technicians and troubleshoot more complex issues. Mentoring apprentices and new employees.
- 3 months in Auckland and 12 months at Intility's office in Singapore. Contributed to establishing 24/7 support, monitoring and incident management from the Singapore office. On-site support for client in Singapore and contributed on-site during onboarding of a new client office in Hong Kong.

**Technician | Intility | Oslo | July 2012 – September 2015**

- Technical support via phone, email and chat. Apprenticeship from July 2012 to February 2014.

## PROJECTS

---

**Bachelor's Thesis | Decisive AS**

- One of Decisive's clients uses an HTTP-based solution for one-way message distribution between applications in an event-driven architecture and cannot use middleware solutions such as Kafka or ActiveMQ. The current solution is pull-based and has some performance limitations. Our task was to test and implement a new solution with push-based technologies to improve performance. Decisive wanted to test R2DBC for push-based database communication, as well as long polling and server-sent events for push-based HTTP communication. We then evaluated whether long polling or server-sent events was best suited. The solution consists of a server, clients, and a database running in Docker containers, developed in Kotlin and Spring WebFlux, with PostgreSQL as the database.

**ITPE3200 – Web Applications | Oslo Metropolitan University | [github.com/vetlelg/ITPE3200-Web-Applications](https://github.com/vetlelg/ITPE3200-Web-Applications)**

- School project developing a map application for registering and storing markers with location data, images, and comments. Initially built in ASP.NET MVC, later recreated with React and ASP.NET Web API. Implemented with Google Maps JavaScript API, EF Core, and SQLite. Designed with Bootstrap and CSS. Full-stack solution including input validation, error handling, logging, unit testing, cookie-based authentication and authorization.

**DAVE3600 – App Development | Oslo Metropolitan University | [github.com/vetlelg/DAVE3600-App-Development](https://github.com/vetlelg/DAVE3600-App-Development)**

- School projects in Android app development using Java. Created an app for simple math exercises, an app for storing birthdays/phone numbers with automatic SMS sending, and an app for saving map markers in an SQL database using the Google Maps Android SDK.

**vetlelg.com | Personal project | [github.com/vetlelg/vetlelg-frontend](https://github.com/vetlelg/vetlelg-frontend)**

- Personal website built with React, Bootstrap, and CSS. Hosted on Azure with automatic deployment with GitHub Actions on new commits.

**DATA2410 – Networking and Cloud Computing | Oslo Metropolitan University | [github.com/vetlelg/DATA2410-DRTP](https://github.com/vetlelg/DATA2410-DRTP)**

- School project in socket programming with Python. A file transfer application for sending files over a network between client and server. It uses UDP and implements TCP-like functionality at the application layer, including a three-way handshake for connection setup, Go-Back-N sliding window protocol for data transfer, and a two-way handshake for connection termination.

**DATA1700 – Web Programming | Oslo Metropolitan University | [github.com/vetlelg/DATA1700-Webprogramming](https://github.com/vetlelg/DATA1700-Webprogramming)**

- School projects in full-stack web development with Java Spring Boot, JavaScript, Bootstrap, and SQL. The course also covered client- and server-side input validation, error handling, logging, cookie-based authentication, sessions, and password hashing and salting.

**DATA1200 – Inclusive Web Design | Oslo Metropolitan University | [github.com/vetlelg/final-assignment](https://github.com/vetlelg/final-assignment)**

- School project in web development and inclusive design. The course covered topics such as HTML, CSS Box Model, Flexbox, Grid and WCAG.

## CERTIFICATIONS AND COURSES

---

**CS50: Introduction to Cybersecurity | Harvard Online | 2024**

**CS50: Introduction to Computer Science | Harvard Online | 2024**

**Azure Fundamentals | Microsoft | 2021**
